

Bytbare legemiddel i Helse Vest 2026/2027

Neste oppdatering er planlagt innan 31.januar 2028

Ansvarleg for dokumentet: Regionalt fagnettverk for legemiddel i Helse Vest.

Dokumentet inneheld hovudsakeleg «basislegemiddel», og er ikkje ei komplett oversikt over alle legemiddel i bruk i sjukehusa. Preparat kan bli avregistrert, og nye preparat markedsført i løpet av dokumentet sin gyldighetsperiode. Oversikta inkluderer ikkje inhalasjonspreparat, auge-/øyredropar, legemiddel til bruk på huda, kjønnsormon, insulinpreparat, LAR-legemiddel eller H-resept legemiddel.

Bytbare legemiddel er i dette dokumentet definert som preparat som inneheld same virkestoff. I tilfelle der det er ulike legemiddelform eller styrke på preparata, er dette markert med "NB! Ulike legemiddelformer" eller "NB! Ulike styrkar".

Begrensa byte er eit omgrep som vert brukt for legemiddel kor DMP oppgjev at byte kun kan gjerast ved oppstart av behandlinga og deretter kun etter løyve frå lege. Legemiddel med merknad om begrensa byte har enten smalt terapeutisk vindauge, eller andre problematiske forhold knytt til dosering og effekt. Legemiddel med begrensa byte er difor merkt med følgjande tekst: "NB! Byte kun etter godkjenning av lege".
